Hi Bruno - I was wondering if BP met with Tom and what the outcome was. We got input from BP on the study language and we should have that reviewed and discussed with your folks this week. We received the revised permit and are reviewing it, I doubt this will take much time on our end. The mercury limit appears, based on my very quick look, to be set at 8.75 as an annual average. Did I read that correctly?

Kevin,

I agree about the BP data. On the letter from Enviro. Groups our position is we issue the General Permits in compliance with our rules and we have recognize and are working to issue General Permits administratively. We are drafting the coal permit and are still shooting to have you all look at it this fall. I think there will be the inevitable back and forth and maybe a few tussles along the way, so we aren't promising outside folks that we will PN a coal permit this year.
